

Patient Report

Direct measurements of brain function

Patient: General Health
Checkup: No Presenting
Concerns: N/A

Referring Physician:
Scan Date: 12/29/2022 9:00 AM

Key Metrics

Brain Reaction Voltage

A measure of cognitive resources. This may decline with such factors as age, concussion, or poor cardiovascular fitness.

Brain Reaction Time

A measure of cognitive processing speed. This may decline with such factors as age, memory loss, or poor cardiovascular fitness.

Physical Reaction Time

Your Physical Reaction Time is distinct from your Brain Reaction Time. This may decline with such factors as age, fatigue, or concussion.

Brain Reaction Voltage Map

Scan (12/29/2022 10:20 AM)

A black X typically indicates poor electrode contact and does not reflect brain activity.
No consistent P300 voltage found.

Theta/Beta Ratio

A measure of wandering vs. focused attention. People with high scores often self-identify as also having ADHD traits. Consult your practitioner to decide if this trait is a deficit or an asset to you.

Frontal Alpha Balance

A measure of frontal symmetry. Scores outside of the target range may indicate a decreased efficiency associated with stress, anxiety, or low moods.

Trailmaking Tests

Part A

Connect randomly placed dots with sequential numbers (1, 2, 3, etc.) in the correct order.

Part B

Connect randomly placed dots by alternating between numbers and letters (1, A, 2, B, etc.) in the correct order.

Physical State

These items can affect cognitive performance, and should be considered when interpreting your results.

Scan (12/29/2022 9:00 AM)

BMI: 31.6

Medications: same

Supplements: d3

Nicotine use: No

Alcoholic drinks: 1-3

Caffeinated drinks: 1-3

Hours of sleep: 7-9

Time since start of last period: Other

Pregnant: No

How to Optimize Your Cognitive Performance

Your practitioner recommends the following changes before your next WAVi scan.

Medications: No recommendations

Supplements: No recommendations

Diet: No recommendations

Therapies/interventions: No recommendations

Lifestyle: No recommendations

Suggested Followup

Regular testing is the key to optimizing your cognitive performance. The ideal time between scans will vary for each individual. Your practitioner has suggested a followup date based on your specific needs and goals.

Your next WAVi scan is due:
No followup date specified.
